

Limit of what the observation supports

What was actually observed

- one sheep
- one side only
- one place, one moment

Man 1 | Australian sheep are black

Overgeneralized to the whole population
(scope: every sheep in Australia)

Man 2 | Some Australian sheep are black

Retreat to existential quantification
(scope: some Australian sheep)

Man 3 | At least one sheep is black

Reduced to the single sample
(scope: the one sheep observed)

Man 4 | At least one is black on one side

Claims only what was observed
(scope: the one side observed)

Beyond what the observation supports
